Preamble

This Program reimagines architecture at the intersection of **digital & AI driven narratives** and **material wisdom, circular construction practices**. It positions AI not merely as a tool but as a co-author in speculative futures, enabling counterfactual design explorations. The focus extends to materials as agents rather than passive resources, ecologies as co-designers and AI as non-human intelligence reshaping design cognition. Through explorations of speculative urbanism and the creation of Cultural Urban Environments (CUE) in digital contexts, participants will engage with the philosophical, ethical and practical dimensions of architecture as cultural scripting. This FDP equips faculty members of COA-affiliated institutions with conceptual clarity, **technological exposure** and **pedagogical strategies** to **integrate digital tools, fabrication processes** and **circular economy principles** into **studio teaching** and **research**.
